PROFESSIONAL PROFILE

Data and research professional with 5+ years collecting, cleaning, validating, analysing and reporting quantitative and qualitative data across academic research, public-facing fieldwork and digital products. Doctoral research in International Development is complete, viva pending, built on a ~29,000-record dataset and 30 in-depth interviews. Currently completing a government-funded Data and AI Skills Bootcamp covering Excel, SQL, Power BI and applied AI automation.

Five end-to-end analytics case studies spanning housing, local government, aviation, automotive and insurance. Use Excel, SQL, Python and Power BI to turn messy synthetic data into strategic business insights: £32.82m in claims decomposed, £8.25m in expenditure reconciled, £20.40m in disruption cost quantified. Comfortable owning the full analytics lifecycle: extraction, cleaning and validation, exploratory and statistical analysis, dashboard development and KPI reporting, through to presenting findings to key stakeholders; full methods, limitations and recommendations are published in the linked portfolio.

CORE SKILLS

Excel: advanced formulas, PivotTables, Power Query, XLOOKUP / INDEX-MATCH, data cleansing, reconciliation and validation workbooks

SQL: querying and data extraction, CTEs, multi-table joins, window functions, aggregation logic, data-quality and integrity checks

Python: data cleaning and transformation, exploratory data analysis, statistical analysis, automation of reproducible, documented workflows

Power BI: data modelling, DAX measures, dashboard development, KPI and management reporting, data visualisation

Analytical: data quality assurance and reconciliation, hypothesis and statistical testing, trend analysis, case-mix adjustment, root-cause and variance analysis

Professional: stakeholder management and communication, requirements gathering, translating technical findings for non-technical audiences, GDPR-aware data handling, process documentation

SELECTED ANALYTICS PROJECTS (SEE PORTFOLIO FOR DETAILS)

Hearthstead Housing Group — Repairs and Contractor Performance

SQL · Python · Excel · Power BI

- Analysed 26,000 repair jobs across 4,000 properties and built a case-mix-adjusted comparison of six contractors, so that performance gaps reflected delivery rather than the difficulty of the work each was given.
- Isolated the single provider behind a mid-2025 decline in on-time completion, and deliberately kept screening signals distinct from final judgement to avoid penalising contractors for harder job mixes.

Westborough Council — Adult Social-Care Expenditure

SQL · Python · Power BI · Excel

- Reconciled an £8.25m year-on-year expenditure increase through a full decomposition of caseload, timing, service mix, unit price and care intensity.
- Established that mean annual cost per person had not risen at a statistically reliable rate, redirecting the investigation away from price and toward volume drivers before resource was committed to the wrong diagnosis.

AeroVista Travel Group — Flight Disruption and Recovery

Python · SQL · Excel · Power BI

- Analysed 25,204 scheduled flights across two years, separating delay causes and quantifying the contribution of each to overall disruption.
- Modelled how inbound lateness cascades once turnaround buffers are exhausted, and quantified £20.40m in synthetic passenger recovery cost to give disruption managers a defensible basis for prioritisation.

Arden Automotive Group — Supplier Reliability and Shortage Risk

Excel · Python · SQL · Power BI

- Analysed 14,403 purchase orders and adjusted supplier scorecards for part difficulty, so rankings measured supplier behaviour rather than the complexity of what each was asked to deliver.
- Identified that supplier lateness combined with logistics delay accounted for 87.1% of shortage events, narrowing a broad risk picture into a focused supplier-improvement plan.

Albion General Insurance — Claims Cost and Operational Quality

Power BI · SQL · Python · Excel

- Analysed 9,263 claims totalling £32.82m paid, decomposing cost growth into its underlying drivers rather than reporting the headline movement alone.
- Assessed settlement duration, reserve adequacy, reopened claims and supplier case mix to produce a targeted set of operational actions in place of a general instruction to reduce cost.

Portfolio data note: all five case studies use fictional organisations and synthetic datasets built for skills demonstration. The analytical methods, validation, interpretation and recommendations are original portfolio work.

PROFESSIONAL EXPERIENCE

Social Research Interviewer | National Centre for Social Research (NatCen)

Mar 2024 – Jan 2025 · Birmingham

- Collected and validated survey data from 100+ households across Birmingham for the English Housing Survey, working to strict fieldwork protocols and study quality standards.
- Managed fieldwork independently end-to-end — scheduling, doorstep contact, interview delivery and reporting — consistently meeting deadlines without day-to-day supervision.
- Handled confidential household information under data-protection requirements, maintaining complete, audit-ready records throughout.
- Built rapport quickly with participants from a wide range of backgrounds and circumstances, sustaining data quality and response completeness in a demanding national survey.

Support Worker | Charis Care Solutions

Feb 2022 – Dec 2022 · Birmingham

- Maintained accurate daily records under confidentiality and safeguarding requirements, ensuring continuity of care and reliable information handover across shifts.
- Coordinated with service users, colleagues, families and external professionals, balancing changing needs, competing priorities and sensitive information with sound judgement.

Research Associate | University of Birmingham

Sep 2021 – Jan 2022 · Birmingham

- Supported an international research project through evidence collection, data organisation, analysis and clear written outputs delivered to project deadlines.
- Maintained accessible, well-documented research materials so colleagues could locate, reuse and verify the underlying evidence, and translated findings into written material for non-specialist readers.

DOCTORAL RESEARCH

Migration and Social-Media Data | University of Birmingham

2022 – Present · Research complete, viva pending

- Built and managed a research dataset of ~29,000 social-media posts alongside 30 in-depth interviews, combining quantitative and qualitative evidence on skilled migrants' aspirations and decision-making.
- Used Python and large language models to clean, sample and classify the corpus, validating classification against a hand-coded sample with formal inter-coder reliability checks.

ADDITIONAL DIGITAL PRODUCT WORK

- **uHired** — Co-founded and built an AI-supported job-search platform that reached 700+ users within four months through organic search alone; defined the product requirements, built the functionality and tested it pre-release.
- **Thessra** — Developed and tested features for reading, organising and interacting with academic documents, sharpening product thinking, technical documentation and user-focused problem-solving.

EDUCATION AND TRAINING

PhD, International Development — University of Birmingham 2022 – Present · Research complete, viva pending

Skills Bootcamp: Data and AI — The Development Manager (TDM) Jul 2026 – Present, expected Oct 2026 · Excel (PivotTables, XLOOKUP, Power Query), SQL, Power BI, AI automation

MA, Social Research (African Studies) — University of Birmingham Merit · 2021 – 2022

MSc, Conflict, Statebuilding and Development — University of Birmingham Distinction · 2020 – 2021

BSc, Geography — Ahmadu Bello University, Zaria First Class Honours · 2014 – 2019
