PROFESSIONAL SUMMARY

Data analyst with five years of experience. I collect, clean, validate, and analyse both quantitative and qualitative data across academic research, national surveys, and digital products. Working end-to-end with Excel, SQL, Python, and Power BI, I manage the entire data lifecycle from extraction to interactive dashboard design. I have completed five self-directed case studies in housing, local government, aviation, transport, and insurance. In these projects, I resolved real-world data errors to reconcile £8.25 million in public expenditure, analyse £32.82 million in insurance claims, and quantify £20.40 million in travel disruption costs. I excel at translating complex technical findings into clear, actionable terms for non-technical stakeholders. During my doctoral studies at the University of Birmingham, I built and analysed a database of 29,000 records and conducted 30 qualitative interviews. I am currently enhancing these skills through a government-funded bootcamp in Data and Artificial Intelligence (AI). Please see my portfolio for full details.

SKILLS

Excel: advanced formulas, PivotTables, Power Query, XLOOKUP / INDEX-MATCH, data cleansing, reconciliation and validation workbooks.

SQL: querying and data extraction, CTEs, multi-table joins, window functions, aggregation logic, data-quality and integrity checks.

Python: data cleaning and transformation, exploratory data analysis, statistical analysis, automation of reproducible, documented workflows.

Power BI: data modelling, DAX measures, dashboard development, KPI and management reporting, data visualisation.

Analytical Approach: data quality assurance, hypothesis and statistical testing, trend analysis, case-mix adjustment, root-cause and variance analysis.

Professionalism: stakeholder management and communication, translating technical findings, GDPR-aware data handling, ethical AI practice.

Portfolio Data Note:: All case studies in this portfolio use synthetic datasets and fictional organisations to demonstrate technical skills. However, the data validation, analysis, interpretation, and strategic findings represent my original, independent work.

PORTFOLIO PROJECTS

Hearthstead Housing Group — Repairs and Contractor Performance

- Analysed 26,000 repair jobs across 4,000 properties to build a case-mix-adjusted comparison of six contractors.
- Ensured that contractor performance metrics reflected actual delivery quality rather than the difficulty of assigned tasks.
- Isolated the single provider responsible for a mid-2025 decline in on-time completions.
- Designed a fair screening process that avoided penalising contractors for handling more complex jobs.

PORTFOLIO PROJECTS

Westborough Council — Adult Social-Care Expenditure

- Reconciled an £8.25 million year-on-year expenditure increase by decomposing caseload, timing, service mix, and care intensity.
- Proved that the mean annual cost per person had not risen at a statistically significant rate.
- Redirected the council's investigation away from pricing and toward volume drivers, preventing resource misallocation on incorrect cost diagnoses.

SQL · Python · Power BI · Excel

AeroVista Travel Group — Flight Disruption and Recovery

- Analysed 25,204 scheduled flights over two years to isolate and quantify individual causes of delays.
- Modelled how inbound lateness cascades through the flight network once turnaround buffers are exhausted.
- Quantified £20.40 million in simulated passenger recovery costs to provide disruption managers with a defensible prioritization model.

Python · SQL · Excel · Power BI

Arden Automotive Group — Supplier Reliability and Shortage Risk

- Analysed 14,403 purchase orders and adjusted supplier scorecards to account for component manufacturing difficulty.
- Created fair supplier rankings that measured actual delivery behaviour instead of part complexity.
- Identified that supplier lateness combined with logistics delays caused 87.1% of all component shortage events.
- Delivered a focused supplier-improvement plan to mitigate critical supply chain risks.

Excel · Python · SQL · Power BI

Albion General Insurance — Claims Cost and Operational Quality

- Analysed 9,263 insurance claims totalling £32.82 million to decompose underlying cost growth drivers.
- Evaluated settlement durations, reserve adequacy, reopened claims, and supplier case mix.
- Produced targeted operational action plans instead of issuing a generic instruction to cut costs.

Power BI · SQL · Python · Excel

uHired (Startup Project)

- Co-founded and developed an AI-supported job-search platform, securing over 800 organic users within five months
- Defined core product requirements, built technical features, and conducted comprehensive pre-release testing.

WORK EXPERIENCE

Social Research Interviewer

Mar 2024 – Jan 2025

National Centre for Social Research (NatCen)

Birmingham

- Collected and validated survey data from over 100 households for the English Housing Survey.
- Adhered strictly to national fieldwork protocols, data governance, and quality standards during data collection.
- Managed all fieldwork schedules, doorstep contacts, and interview deliveries independently without daily supervision.
- Built rapid rapport with diverse participants to secure high response rates and complete datasets.

WORK EXPERIENCE

Support Worker

Feb 2022 – Dec 2022

Charis Care Solutions

Birmingham

- Maintained accurate daily care records under strict confidentiality and safeguarding regulations.
- Coordinated care plans with service users, families, and external healthcare professionals.
- Balanced changing service needs and sensitive information using professional judgement.

Research Associate

Sep 2021 – Jan 2022

University of Birmingham

Birmingham

- Supported an international research project by collecting evidence and organising qualitative data.
- Analysed research data to deliver clear written reports within tight project deadlines.
- Organised research materials to ensure project lead could easily find and verify sources.

EDUCATION

University of Birmingham

Sep 2022 – Present

PhD in International Development

Grade: Research complete, viva pending

The Development Manager (TDM)

Jul 2026 – Oct 2026

Skills Bootcamp in Data and AI

University of Birmingham

Sep 2021 – Sep 2022

MA in Social Research (African Studies)

Grade: Merit

University of Birmingham

Sep 2020 – Sep 2021

MSc in Conflict, Statebuilding and Development

Grade: Distinction

Ahmadu Bello University, Zaria

Sep 2014 – Apr 2019

BSc in Geography

Grade: First Class Honours
